

Workshop
Multimedia narrative as educational tool
Rome, 13. July 2017
Link Campus University- Via Gregorio VII 601, Rome

The workshop addresses the important issue of how to transform multimedia narratives into educational tools. Narrative and stories in education have been the focus of increasing attention in recent years. The idea of narrative is fertile ground for educators who know intuitively the value of stories in teaching and learning.

Starting from the best practice of the project *NAR-SPI Narrative educational resources for socio professional inclusion*, a European project funded under the Erasmus+ Programme KA2, participants will have the chance to learn actively how to build a didactic path using digital narratives.

The workshop is held by Federica Pesce (Melting Pro) and Laura Bove (Melting Pro)

Programme

Start. h.14.30

Introducing the project *Narrative educational resources for socio professional inclusion*: objectives and output

Storytelling as didactic tool

h. 15.00
